- // Smooth stall behaviour
- // Increased speed range
- // Easier to control, uncompromising performance

# ASPECT2

The Levitaz Aspect2 has been completely redesigned.

The new wing is created with a lower aspect ratio and rounded tips. Therefore, the foil is easier to control and safer to ride without losing the radical performance of the previous model. The new shape offers a huge speed range. This fact is underlined by its smooth stall behavior and the low stall speed.

The Aspect2 is pre-configured with the 55 cm fuselage and the Bionic rear wing which enables unprecedented maneuverability.

**Lift speed** 9.8 knots
